

Symptomatic Bradycardia

Patient: *George Thompson, 80*

Presentation

Dizziness, near syncope.

- HR: 36 bpm
- BP: 82/48

Monitor

Sinus bradycardia.

Electrical

Reduced SA node firing.

Cellular

Decreased pacemaker automaticity (possibly high vagal tone).

EMS Medication

Atropine (anticholinergic) – not necessary rn

Mechanism

Blocks vagal influence on SA node → increases firing rate.

If ineffective → transcutaneous pacing.
