

Ventricular Fibrillation

Patient: *James Holloway, 58*

Presentation

Collapsed at gym. Pulseless.

Monitor

Chaotic waveform. No organized QRS.

Electrical Macro

Complete ventricular electrical disorganization.

Cellular Level

Ventricular myocytes firing independently with no coordinated depolarization.

EMS Treatment

Immediate defibrillation.

Medication per ACLS:

Amiodarone and lidocaine

Mechanism

Blocks K^+ channels → prolongs repolarization → stabilizes myocardium.
